- + 17,50 €** – Thread recutting (per thread)
- + 35,00 €** – Drill out sensor + recut (Drill out and recut thread / per thread))

A prerequisite for successful cleaning is that the filter is technically flawless, i.e. the filter ceramic must not be broken or cracked. All pressure and temperature sensors as well as attachments (hoses, clamps, holders, heat protection plates) must be removed. We assume no liability for attachments that have not been removed or no guarantee for the functionality of sensors, heat protection plates, etc. that have been removed by us! Likewise, we can not assume liability / warranty for chemically pre-treated filters.

Heat shields + EGR screens (especially with oil deposits) can be damaged by thermal cleaning due to the very thin material. Experience shows that the filter function is not impaired! After receipt and inspection of the filter, we will send you the payment information by e-mail. Cleaned filters will be shipped only after receipt of payment!

The General Terms and Conditions of Barten GmbH ([www.russfilterreinigung.de/AGB\\_EN.pdf](http://www.russfilterreinigung.de/AGB_EN.pdf)) are accepted!
